

Guidelines for Undergraduate Thesis Presentation

1. **Weight of presentation:** Please refer to the course description where the weights of the presentation and the report are indicated.
2. **Evaluation criteria:**
 - The quality of the slides (form and content): 80%
 - Presentation delivery: 20%
3. **Talk time (max. 20 mins, includes context switching time):** **HARD STOP**
 - a. Deliver the content in 16-17 mins.
 - b. Q &A: up to 3-4 mins.

Please note that at 20 mins, the presentation will be cut off to enable the next speaker. Thus, please prepare your talk accordingly.

Presentation mode and schedule:

- Online presentations.
- Sign up and schedule details: on OneDrive – link provided on Brightspace.

[illegible]

Evaluation criteria (SLIDES) – 80%:

TITLE Slide (Talk title, Speaker-name, Course Number, Dept/University name, Supervisor-name and Dept., and Course coordinator name (Prof. Nazim Madhavji, Dept. of Computer Sc.)
Slide number on each slide, bottom RIGHT ("**X of Y**" format)

KEY HEADERS REQUIRED on a new slide (minimum set):

- Introduction
- TOC
- (Background if necessary &) Related Work
- Research Methodology
- Results
- What's New?
- Impact on Theory & Practice
- Limitations of the Results
- Validation
- Conclusions
- Future Work & Lessons Learnt
- EXTRA MATERIAL

[CAUTION – KEEP YOUR TIMING IN CHECK – DO NOT GO BEYOND THE TIME ALLOCATED. Move extra slides or details to “EXTRA MATERIAL”.]

INTRODUCTION: [2 slides MAX]

(General Context (**give citations – APA Style**); Current situation and problems (**give citations**); Research Gap addressed (**give citations**); Results attained; Novelty/Progress made (**give citations**); Impact of Results on Theory & Practice (**give citations**))

Table of Contents slide [1 slide MAX]

(Note that this is deliberately **after** the Introduction)

(BACKGROUND if necessary &) RELATED WORK:

(Explain previous work in the field (**give citations**))

RESEARCH METHODOLOGY:

(e.g.: Core technical details/ideas pertaining to tackling the research problem; Research techniques/methods/approach/strategy used; Rationale for decisions made. (**give citations**))

IF a DEVELOPMENTAL PROJECT: {Implementation strategy (technological issues (platform, tools, libraries, algorithms, languages, etc.), process issues (e.g., cyclic build/test/feedback cycles)); (**give citations**)}

IF an EMPIRICAL STUDY: {Study details; Research Question/Hypothesis; Descriptive Statistics; Data gathering instrument (templates, interview questionnaire, etc.); Sample data used in the study; Data analysis techniques/approach; Threats to Validity}; (**give citations**)}

RESULTS:

[If a Developmental Project]

- **First slide: Summarise in bullet points the KEY results attained.**
- Give details of each KEY point: [start each result on a new slide]
- Give:
 - System architecture, algorithm, etc.
 - Run-time models, e.g., sequence charts, state charts, etc.
- Show screenshots: EVIDENCE of system operation and (I/Os) through usage scenarios.

[If an Empirical Study]

- **First slide: Summarise in bullet points the KEY results attained.**
- Give details of each KEY point: [start each result on a new slide]
- Show charts, tabulated results, statistical results (e.g., precision/recall values)
- Any threats to the validity of the results?

WHAT'S NEW?

- **For the KEY result**, show how it is **novel/faster/better/cheaper/different** than what was possible previously. For example:
 - Show what is now possible that was not possible before;
 - Show what is NEW/DIFFERENT from before; etc.
